-i- FUNCTION: VOLTAGE-GATED CHLORIDE CHANNELS:
SEVERAL FUNCTIONS INCLUDING THE REGULATION OF CELL VOLUME;
MEMBRANE POTENTIAL STRABILIZATION, SIGNAL TRANSDUCTION AND
TRANSEPITHELIAL TRANSPORT.

-i- SUBCELLULAR LOCATION: Integral membrane protein.

-i- TISSUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN SKELETAL MUSC
-i- SIMILARITY: BELONGS TO THE CHLORIDE CHANNEL FAMILY.

-i- SIMILARITY: CONTAINS 2 CBS DOMAINS.

Steinmeyer K., Ortland C., Jentsch T.J.;

Primary structure and functional expression of a developmentally regulated skeletal muscle chloride channel.";

Nature 354.301-304 (1991).

-I- FUNCTION: VOLTAGE-GATED CHLORIDE CHANNEL. CHLORIDE CHANNELS HAVE SEVERAL FUNCTIONS INCLUDING THE RESULATION OF CELL VOLUME;

MENBRANE POTENTIAL STABILIZATION, SIGNAL TRANSDUCTION AND TRANSEPITHELIAL TRANSPORT.

-I- SUBSCELLULAR LOCATION: Integral membrane protein.

-I- SUBSCELLULAR LOCATION: Integral membrane protein.

-I- SIMILARITY: BELONGS TO THE CHLORIDE CHANNEL FAMILY.

-I- SIMILARITY: CONTAINS 2 CBS DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    InterPro; IPR000644; CBS_domain.

FUNCTION: Chromatin-remodelling protein that function cell fate determination.
SUBCELLULAR LOCATION: Nuclear (Potential).
SIMILARITY: BELONGS TO THE SUB-Z/RAD54 HELICASE FAMILY.
SIMILARITY: CONTAINS 2 PHD-TYPE ZINC FUNGERS.
SIMILARITY: CONTAINS 2 CHROMO DOMAINS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CARRY OUT HIGH-RACTS WITH OUTER MEMBRANE RECEPTOR PROTEINS THAT CARRY OUT HIGH-AFFINITY BINDING AND ENERGY DEPENDENT UPTAKE INTO THE PERIPLASMIC SPACE OF SPECIFIC SUBSTRATES SUCH AS COBALAMIN, AND VARIOUS IRON COMPOUNDS (SUCH AS IRON DICITRATE, ENTERCHELIN, AEROBACTIN, ETC.). IN THE ABSENCE OF TONB THESE RECEPTORS BIND THEIR SUBSTRATES BUT DO NOT CARRY OUT ACTIVE TRANSPORT. TONB ALSO INTERACTS WITH SOME COLICINS AND JS INVOLVED IN THE ENERGY—DEPENDENT, IRREVERSIBLE STEPS OF BACTERIOPHAGES PHI-80 AND TI INFECTION. IT COULD ACT TO TRANSDUCE ENERGY FROM THE CYTOPLASMIC MEMBRANE TO SPECIFIC ENERGY-REQUIRING PROCESSES IN THE OUTER MEMBRANE, RESULTING IN THE RELEASE INTO THE PERIPLASM OF LIGANDS BOUND BY THESE OUTER MEMBRANE PROTEINS.

ANTIREPRESSOR.

ANTIREPRESSOR.

ANTIREPRESSOR.

INSUE SPECIFICITY: UBIQUITOUS. HIGH LEVELS OF EXPRESSION ARE DIFFECTED IN LUNG, SPLEEN AND BRAIN.

INDUCTION: REGULATED DURING CELL CYCLE PROGRESSION.

INDUCTION: THE N-TERNINAL REGION CONTAINS REPRESSION FUNCTIONS TO ARE DIVIDED INTO THREE INDEPENDANT REPRESSION DOMAINS (RD1, RI AND RD3). THE C-TERMINAL REGION CONTAINS THE NUCLEAR RECEPTOR-INTERACTING DOMAINS THAT ARE DIVIDED IN TWO SEPARATE INTERACTING THAT ARE DIVIDED IN TWO SEPARATE INTERACTING THAT ARE DIVIDED IN TWO SEPARATE INTERACTIONS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: MEDIATES THE TRANSCRIPTIONAL REPRESSION ACTIVITY OF SOME NUCLEAR RECEPTORS BY PROMOTING CHROMATIN CONDENSATION, THUS PREVENTING ACCESS OF THE BASAL TRANSCRIPTION.

SUBUNIT: FORMS A LARGE COREPRESSOR COMPLEX THAT CONTAINS SINJA/B AND HISTONE DEACETYLASES HAACI AND HDAC2. THIS COMPLEX ASSOCIATES WITH THE THYROID (TR) AND THE RETINOID ACID RECEPTORS (BAR) IN THE ABSENCE OF LIGAND, AND MAY STABILIZE THEIR INTERACTION WITH TRIB. SUBCELLULAR LOCATION: Nuclear.

ALTERNATIVE PRODUCTS: 2 ISOPORMS; SMRT/TRAC-2 (SHOWN HERE) AND TRAC-1; ARE PRODUCED BY ALTERNATIVE SPLICING. TRAC-1 CONTAINS ONLY THE C-TERMINAL RECEPTOR-INTERACTING DOMAIN AND ACTS AS AN ANTITERPRESCOP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SPECIFICITY.

SIMILARITY: CONTAINS 1 SANT-A DOMAIN.

SIMILARITY: CONTAINS 1 MYB-LIKE DOMAIN.

SIMILARITY: CONTAINS 2 CORNR BOXES.

SIMILARITY: BELONGS TO THE N-COR NUCLEAR RECEPTOR COREPRESSORS FAMILY.

-i-TISSUE SPECIFICITY: Highly expressed in skeletal muscle, thymus, placenta and lung. Expressed at lower level in brain, heart, colon, spleen, kidney.

-i-MISCELLANEOUS: Candidate gene for the Cat Eye Syndrome (CES), a developmental disorder associated with the duplication of a 2 Mb region of 22q11.2. Duplication usually takes in the form of surpernumerary bisatellited isodicentric chromosome, resulting in four copies of the region (represents an inv dup(22)(q11)). CES is characterized clinically by the combination of coloboma of the iris and anal atresia with fistula, downslanting palpebral fissures, preauricular tags and/or pits, frequent occurrence of heart and renal malformations, and normal or near-normal mental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        "Sequence analysis of LRPPRC and its SEC1 domain interaction partners suggests roles in cytoskeletal organization, vesicular trafficking, nucleocytosolic shuttling, and chromosome activity.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE=2108293; PubMed=11214970;

Graff J.M., Stumpo D.J., Blackshear P.J.;

"Molecular cloning, sequence, and expression of a cDNA encoding the chicken myristoylated alanine-rich C kinase substrate (MARCKS).";

Mol. Endocrinol. 3:1903-1906(1989).

-i- FUNCTION: MARCKS IS THE MOST PROMINENT CELLULAR SUBSTRATE FOR PROTEIN KINASE C. THIS PROTEIN BINDS CALMODULIN, ACTIN, AND SYNAPSIN. MARCKS IS A FILAMENTOUS (F) ACTIN CROSS-LINKING PROTEIN.

-i- PTM: PHOSPHORYLATION BY PKC DISPLACES MARCKS FROM THE MEMBRANE. IT ALSO INHIBITS THE F-ACTIN CROSS-LINKING ACTIVITY.

-i- SIMILARITY: BELONGS TO THE MARCKS FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    P16527;
